

Grow & Care

Stage 4: Functional prototype

URL for the prototype:

ipm-2025.vercel.app

Startup instructions:

Connect to the website, for pages that ask for login use anna@fakemail.com with password 1234. For local deployment follow instructions in Github.

Briefing:

Grow&Care is a web platform designed to help parents and caregivers easily find trustworthy, age-appropriate, and personalized activities that support their children's development.

Resources like, ideas for activities, social events, or tips and articles are scattered across different websites and social media pages, making it difficult to identify what is truly suitable for each child's age, interests, and developmental needs. As a result, caregivers often feel overwhelmed by information overload and unsure of where to begin. Grow&Care addresses this issue by bringing together curated, high-quality resources in one place. It helps users discover and plan activities tailored to their child's profile, offering both practical ideas for daily use, opportunities to connect with the local community.

Scenarios:

Below you will find the different scenarios to test the functional prototype.

Scenario 1

Anna, mother of a 6-year-old kid, wants to find craft ideas that she can do with her daughter. She's looking for things that can be done indoors focused on the art-and-craft world and wants to save them for later browsing.

Scenario 2

Anna wants her 6-year-old daughter to get better at socializing and is looking for social events that will help her daughter achieve this. She wants to find and book an event scheduled for this week.

Scenario 3:

Anna's child has a difficult time falling asleep, she wants to find tips to help her young child fall asleep more easily.

Scenario 4.1:

Anna wants her 4 year-old child Andromaca to play an online game appropriate for his age while being sure that he will find a child-safe website area.

Scenario 4.2:

Little Andromaca wants to play a game involving colors and shapes. After a while, he gets bored and wants to explore the rest of the website.

Application description:

The functional prototype was developed in React using TypeScript and it is hosted on Vercel with a Supabase backend for database.

The prototype implements the core user interface with tips, events, activities to browse. Also users can save activities and events, and booking an event is also possible. In play mode two games are available: *color shaping* for the 3-5 age group and *hypercomplex analysis* for the 9-12 age group. There are no games implemented for the 6-8 age group yet. Full profile management is currently missing, however this does not impact the testing of the features outlined in the scenarios.
