

Grow & Care

N.	Problem	Heuristic	Description	Severity	Solution	Group Agreement	Alternative Solution
1	Responsive header layout breaks	H4: Consistency and Standards; H8: Aesthetic and Minimalist Design; P7: Consistency	When the browser window is narrowed, the header displays strange/broken behavior. Navigation elements likely overlap or misalign.	2	Implement responsive CSS breakpoints for the header. Use flexbox or grid with proper wrapping behavior. Test at common viewport sizes (mobile 375px, tablet 768px, desktop 1024px+).	Agree	
2	Filter panel lacks visual hierarchy	H8: Aesthetic and Minimalist Design; H6: Recognition Rather than Recall; P1: Discoverability; P10: Knowledge Distribution	The Goals and Categories filter sections display all options simultaneously in long lists, creating visual clutter and requiring excessive scrolling.	1	Implement accordion-style collapsible sections for Goals and Categories. Show headers with expand/collapse icons and display selected filters prominently at the top.	Agree	
3	Favouriting without an account provides no feedback	H1: Visibility of System Status; H5: Error Prevention; H9: Help Users Recognize, Diagnose, and Recover from Errors; P5: Feedback	When users attempt to favourite an activity or event without being logged in, no message or visual reaction is provided. It is unclear whether the action failed, requires authentication, or is non-functional.	3	Display an authentication modal ("Please log in to save favourites"), disable the favourite button, or show a lock icon. Provide immediate feedback when the action is not allowed.	Partially Agree	Button is already non-functional for unauthenticated users; login is only for testing and not implemented.
4	"Book Event" button missing from event cards	H7: Flexibility and Efficiency of Use; H4: Consistency and Standards; P1: Discoverability; P10: Knowledge Distribution	The "Book Event" action is only accessible inside the event detail modal. Users cannot book directly from the event list, forcing an unnecessary extra step.	2	Add a "Book" button directly on event cards in the list view. Use a distinct style and ensure the "Bookable" tag indicates availability.	Agree	
5	Tag/filter badges overflow modal boundaries	H8: Aesthetic and Minimalist Design; H4: Consistency and Standards; P7: Consistency	Tags extend beyond modal boundaries or appear misaligned. Some tags become cut off or improperly wrapped.	2	Implement proper flexbox tag wrapping (flex-wrap: wrap). Add spacing (gap: 8px), ensure tags remain within padding boundaries, and consider showing only the most relevant tags with a "+3 more" option.	Agree	While tags already use flex, showing only the most relevant 4 is a good idea.
6	Booking an event without an account provides no feedback	H1: Visibility of System Status; H5: Error Prevention; H9: Help Users Recognize, Diagnose, and Recover from Errors; P5: Feedback	When clicking "Book Event" while logged out, no reaction occurs. Users have no indication that authentication is required.	3	Show a modal informing the user that booking requires authentication, or disable the button with a tooltip.	Partially Agree	Same as favouriting: login is not implemented and the feature depends on authentication.
7	No exit button until game ends; no way to reset	H3: User Control and Freedom	When a user enters a game by mistake, no exit button is shown until they finish the game. Cards also do not reset unless leaving and re-entering.	3	Add an exit button immediately and provide an option to reset or restart the game.	Agree	

8	No option to recover the PIN in child-safe mode	H5: Error Prevention; P3: Signifiers; P6: Constraints; P8: Conceptual Model	If the PIN is forgotten while in child-safe mode, there is no recovery option. Users cannot exit unless they leave the site entirely.	4	Add a PIN recovery option or a fallback.	Agree	Although the PIN is session-based, a simple solution is emailing the PIN to the profile address.
9	Clicking "Play Mode" unexpectedly adds a new PIN	H4: Consistency and Standards; H5: Error Prevention; P4: Mapping; P5: Feedback	Selecting "Play Mode" generates a new PIN instead of navigating to the Play Mode menu, causing confusion.	3	"Play Mode" should redirect to its landing page with consistent behaviour and clear signifiers.	Disagree	The PIN is meant as a boundary; a new one is expected each time. An explanatory text will be added.
10	Favourites are hidden inside dropdowns, reducing efficiency	H7: Flexibility and Efficiency of Use; H6: Recognition Rather than Recall; P4: Mapping	Favourite items are only accessible through dropdowns, adding steps and reducing efficiency.	2	Create a dedicated "My Favourites" or "Saved Items" section visible in the header.	Partially Agree	Would improve efficiency but add clutter; dropdowns are already short and easy to navigate.
11	Missing logout button	H3: User Control and Freedom; H4: Consistency and Standards; P1: Discoverability	No visible logout option, preventing users from managing their session.	4	Add a logout option in a standard user menu or avatar dropdown.	Disagree	Login/logout is only minimally implemented for testing and should not be evaluated.
12	No clear success feedback after booking an event	H1: Visibility of System Status; P5: Feedback	After booking, no explicit success message appears. Only the button changes to "Delete Booking", which users may not notice.	3	Show a toast notification or confirmation message when booking succeeds.	Partially Agree	The red "Delete Booking" button is already a clear visual cue; a toast could enhance clarity.
13	"For Children" label at top of sidebar is unclear	H4: Consistency and Standards; H6: Recognition Rather than Recall; P3: Signifiers	The sidebar label "For Children" is ambiguous since the entire platform is for children's activities.	2	Rename the label to "Categories" and increase its visual prominence.	Agree	Introduce grouping of categories.
14	Age range filter should use fixed options instead of slider	H4: Consistency and Standards; H5: Error Prevention; H6: Recognition Rather than Recall; P6: Constraints	The continuous slider allows overly precise or meaningless ranges and may mislead users regarding activity age groups.	2	Replace slider with discrete age categories (0–2, 3–5, 6–8, etc.).	Disagree	A slider is intuitive, increments in steps, and supports parents with children in multiple age ranges.
15	No feedback when filters produce zero results	H1: Visibility of System Status; H6: Recognition Rather than Recall; H9: Help Users Recognize, Diagnose, and Recover from Errors; P5: Feedback	When filters yield no matches, the interface shows an empty screen with no explanation.	3	Display a message ("No activities available") and optionally a reset option.	Partially Agree	A message is useful; however, "All categories" and "All goals" already serve as a reset.
16	"Read More" button lacks hover affordance	H4: Consistency and Standards; H6: Recognition Rather than Recall; P2: Affordances; P3: Signifiers; P5: Feedback	The "Read More" button shows no visual change on hover, reducing perceived interactivity.	1	Add hover styling (cursor pointer, color change, subtle animation).	Disagree	The button already changes color on hover.
